

2012 Skills Canada Saskatchewan

Web Design Competition

Competitors Instructions

Module B – JavaScript

Your Task

Your task is to animate the content information in the webpage you created in Module A. When the user clicks on a menu button the page contents will be animated. When the user hovers over the menu item, the menu item will change to the colour provided within the Photoshop Document file (PSD) file. Content for the animated slides is located within the PSD file.

The web page will be validated and checked in Internet Explorer 9 and Firefox 10.

JavaScript Requirements

The Mini-website has the following functionalities:

Buttons

- Change appearance when user hovers over the buttons

Content

- Information in the content region is animated, ex: slides or fades into view when the corresponding button is clicked on.

End Result

The end result should be a single XHTML/CSS page that can be previewed in both Internet Explorer 9 and Firefox 10 whilst looking as close as possible to the original design. Note: It is acceptable that some variations may occur between browsers; however the website must display properly.

Save your complete HTML, CSS and JavaScript files in a folder labeled as **modB_X** (*where X is your competitor number*).
